Guide on how to plant larger trees

- Fill the base 50/50 compost & soil
- Do not fertilise at this stage
- Fork bottom of hole to allow drainage
- Prominent prevailing wind
- Fill the base 50/50 compost & soil
do not fertilise at this stage

Important watering. Everybody's garden will drain differently. Water well when planted. Keep watered, when ground has started to dry out.

- Tack nail into brace bar stops tree tie from slipping
- After a strong wind check stake and tie for movement and re stake if needed
- Do not drive stake into root
- Mycorrhizal treatment helps root growth; helps against counter acting fungus. Do not mix in. Put a layer in direct contact with roots.

- Most important keep top of root 1/2 to 1 inch proud - do not cover root
- Special guard protects against rabbits and cats
- Rubber tree tie Prevents damage to bark and helps support in high winds

- Prominent prevailing wind.

Fertilise after planting 6 inch to a foot away from roots. This will encourage roots to chase for food and make better root growth.
